Prepared for

Store or business name | Name | Phone

Price

Item	JOD	USD
WooCommerce online store design One time, with the scope in this quote	**JOD 600** instead of ~~JOD 1,000 / $1,410~~	**$846**
Hosting: Professional plan Separate annual subscription, a condition of this price, renews at the listed plan price	**JOD 199**	**$279**
First-year total	**JOD 799**	**$1,125**

The offer price of JOD 600 / $846 instead of JOD 1,000 / $1,410 applies to orders whose first payment is made by 31 December 2026. After that date the design price returns to JOD 1,000 / $1,410.

Payment stages

First payment at the start: 50% of design + annual hosting	**JOD 499**	**$702**
Second payment on your approval before launch: 50% of design	**JOD 300**	**$423**

What does the store design price include?

- **Store design in your brand:** Home, categories, product page, cart, checkout and customer account, built to work well on phones, on WooCommerce and WordPress.
- **Up to 10 products added:** From the product sheet and photos you send, with categories and options such as size and colour. We show you how to add the rest from the dashboard.
- **One payment gateway connected:** Any payment gateway that supports WooCommerce and where you hold a merchant account, plus cash on delivery and CliQ transfer. The gateway's contract and fees are between you and the gateway.
- **Shipping and emails:** Shipping zones inside Jordan with the rates you set, and order and invoice emails for your customers and for you.

- **Google tools:** Google Analytics 4 with store events, Google Merchant Center to show your products on Google, and Google Search Console with the sitemap.
- **Pixels set up properly:** Meta Pixel, TikTok Pixel and Snap Pixel on your own accounts, with the right store events and no duplicates, working according to the visitor's cookie consent.
- **Store linked to your social pages:** Links to your existing accounts and share buttons, and your product catalogue connected to your Meta business account where the feature is available to you. We don't create the accounts or run their content.
- **Sign in with Google:** Your customers sign in to their store accounts with one click using Google, without creating a new password.
- **Security, speed tools and plugins configured:** Every tool in the next section is switched on and configured for your store before launch, not just installed.
- **2 revision rounds and a full handover:** Store admin access, a short walkthrough on adding products and handling orders, and the domain registered in your name.

The tools and plugins running in your store, and what each one does

- **LiteSpeed Enterprise:** The web server that delivers your store's pages, faster for WordPress and WooCommerce than traditional servers.
- **Imunify360:** A web application firewall, regular file scanning and blocking of IP addresses known for attacks.
- **Monarx:** Real-time scanning of files as they are uploaded, and behaviour-based malware detection.
- **CloudLinux:** Isolates each hosting account from the others on the server and limits its resources.
- **JetBackup 5:** A daily backup of files, database and email, stored away from the hosting server.
- **SSL and WP Toolkit:** A free SSL certificate that encrypts checkout and account pages, and WP Toolkit to create a staging copy of the store.
- **LiteSpeed Cache:** Page and image caching plus file optimisation, automatically excluding the cart, checkout and customer account.
- **Loginizer Pro:** Login protection: blocks guessing attempts, adds two-factor authentication, renames the login page, adds reCAPTCHA and Sign in with Google.
- **Backuply Pro:** Scheduled store backups to external cloud storage you choose, such as Google Drive, Dropbox or Amazon S3.
- **JetBackup (WordPress plugin):** Backup and restore from inside the WordPress dashboard: files, database or both.
- **FileOrganizer Pro:** A file manager inside the WordPress dashboard.
- **GoSMTP Pro:** Sends store emails such as order confirmations, invoices and password resets through a reliable sending service, with a message log, resending and failure alerts.
- **CookieAdmin Pro:** A cookie consent banner in Arabic and English, with Google Consent Mode v2 and a consent log.
- **Pagelayer Pro:** A drag-and-drop page builder we use to design your store pages.
- **FormLayer Pro:** A drag-and-drop form builder, for example a contact form or a special order request.
- **SiteSEO Pro:** A title and description for every page and product, content analysis, Google and social previews, and structured data (Schema).

- **Site Kit by Google:** Connects the store to Google tools such as Analytics and Search Console and shows their numbers in the WordPress dashboard.
- **ShareMyPost Pro:** Social sharing buttons for products and pages, with share tracking.
- **SocialFeeds Pro:** Shows your Instagram, Facebook and YouTube posts and your Google reviews inside the store.
- **Deskuss:** A support ticket system inside the store to receive and follow up customer questions.
- **Kanbanz Pro:** A task board for your team linked to Deskuss tickets, with time tracking and reports.
- **OneMCP Pro:** Connects AI assistants to your store through MCP to manage content and products.
- **SoftWP:** A getting-started tour inside the dashboard, and the Softaculous AI assistant to help write content.

What does the price not include?

- Writing product descriptions, translation and product photography
- Logo and brand identity design
- Creating social media accounts or a Google Business Profile, or running their content
- Opening a merchant account with the payment gateway, and its fees
- Running or funding paid ads
- More than 10 products, a second gateway, a second language, or accounting or inventory integrations, by written quote
- Content edits after launch; the dashboard is in your hands
- Promises about Google rankings or sales volume

How do we build your store?

1. **We agree the scope:** We hear what you sell and send a written quote: products, payment gateway, shipping zones and tools.
2. **First payment and hosting:** You pay 50% of the design price and subscribe to the Professional plan the store will run on.
3. **You send content and access:** Logo, photos and product sheet, your shipping and returns policy texts, and access to your payment gateway, Google and Meta accounts.
4. **First version on a preview link:** You see the whole store before launch and try the cart and checkout yourself.
5. **2 revision rounds:** You send your notes grouped per round, and we revise and retest.
6. **Test, then launch:** A test order, a test payment and a tracking check, then the second payment and launch on your domain.

The 30 working days start when we have the full content, products and account access, and pause while we wait for your notes or for the payment gateway to approve your merchant account.

Terms

- Refund guarantee: within 14 days of the first payment and before the store is delivered, as in our refund policy. The design fee is not refundable after delivery.
- "Delivery" means sending you the published store link and the dashboard login.
- Paid plugins run from Start Bigger licences while the hosting subscription is active; on cancellation we notify you and switch them off 14 days later, as in our terms.
- Payment gateway fees and the merchant account contract are between you and the gateway and are not part of this price.
- Card payments are charged in US dollars by a PCI DSS certified provider. In Jordan you can also pay in dinars via CliQ or an e-wallet.
- This is a general quote. Once the scope is agreed we send a written quote in your name from our billing system, then the first invoice.
- Full terms: startbigger.com/en/legal
